

For Immediate Release:

Rancho Dominguez, CA – January 12, 2015 – Excellon announces the installation of a model 136L Intelli-Drill System at Bay Area Circuits, Inc. of Fremont, California.

The **Excellon 136L Intelli-Drill™ System** with a large work area of 30 by 36 inches and fast, accurate axis positioning via linear motor technology, makes quick work of large panel prototype as well as production PCBs. The Intelli-Drill vision system provides capabilities such as post lamination tooling optimization, drilling/routing relative to surface targets and features ensuring high accuracy and precise hole placement.

“The 136L Intelli-Drill strengthens our manufacturing capabilities particularly related to small hole drilling, registration and tighter tolerances,” said Stephen Garcia, President, Bay Area Circuits. “Our investment in the 136L will improve production efficiency and ultimately allow us to create additional value for our customers.”

Mike Sparidaens, Vice President of Sales at Excellon, shared his comments: “Excellon has partnered with Bay Area Circuits since the 1970's. We look forward to the implementation of the 136L Intelli-Drill System and being a part of Bay Area Circuit's high technology facility for years to come.”

Bay Area Circuits, Inc., has been serving the PCB needs of high-tech electronics manufacturers, contract assemblers, and design engineers for nearly 40 years. Located in the heart of Silicon Valley, Bay Area Circuits' focus on high quality, quick-turn prototyping has enabled the company to become a premiere PCB supplier for discerning customers around the world. More information about Bay Area Circuits can be found by visiting the company's website, www.bayareacircuits.com.

Excellon, an employee-owned company, is recognized worldwide as a leader in installed PCB Drilling systems with products ranging from single and multiple station mechanical drilling machines to hybrid laser precision via formation and routing systems. See us at the IPC APEX Expo February 24-26, 2015.
